

G10 – G40 Diaphragm Gas meter

Diaphragm Gas meters have a long tradition. They are characterized by a long service life, a large measuring range, long term measurement stability, and maintenance-free operation.

The DMIT diaphragm gas meters offer all the advantages of a metering device without additional energy requirement.

Operating

1 → 16

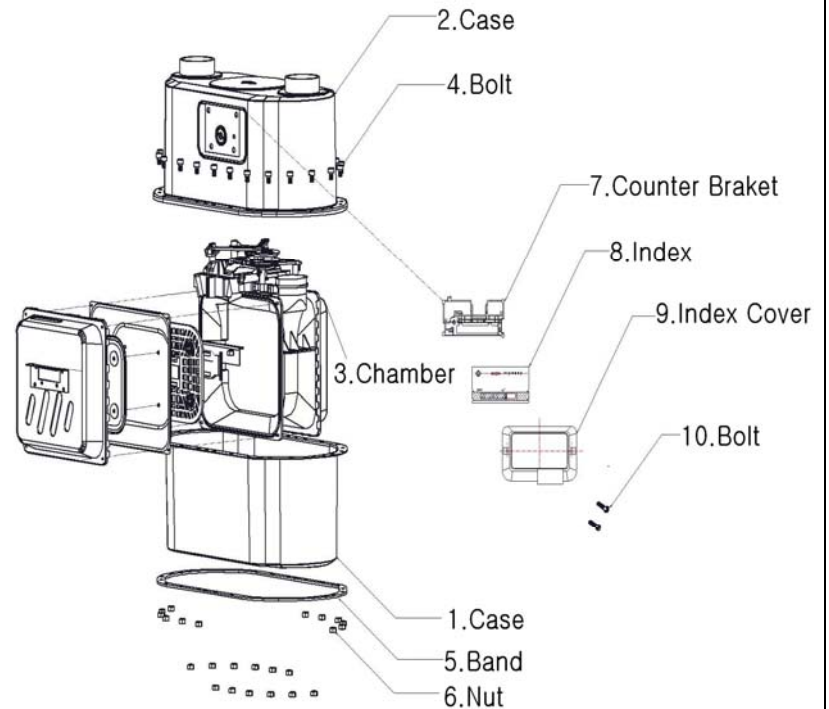

Required attention

- ✓ 1 Before the installation,
- ✓ 2 pls remove impurities in the pipe.
- ✓ 3 Check the tightness of the pipe.
- ✓ 4 Check the inlet and outlet and install the meters horizontally
- ✓ 5 Do not install near the fire-related products.
- ✓ 6 Do not make physical impact against the products.
- ✓ 7 Open the valve slowly (inlet) for 1 minute

Operating

✓ measuring chambers are separated by synthetic diaphragms. The chambers are filled, and emptied periodically as the chambers slide left and right, and the movement of the diaphragms is transferred via a gear to the crankshaft. This shaft moves the valves, which control the gas flow. The rotations of the gear are transferred via a magnetic coupling to the index.
